WebOSHub Hotel Mode

Introduction

Hotel mode for smart UHD TVs with webOS 7 and higher is an advanced installation method. It is intended for limiting certain operational parameters of televisions according to specific needs of their own deployment. Brief extract is below. Access to the hotel mode is protected against misuse by an administratively configurable numerical code.

CAUTION:

If you do not have software 04.51.80 (for UHD models) or 13.45.36 (for HD/ FHD models) or newer installed on your TV, first update the software from the internet (OTA update).

Power On Status

Determines the TV behaviour after connecting to electricity (switching off with the central switch): **PWR** (TV switches on), **STD** (TV remains in Standby), **LST** (TV goes to the last state).

Volume

Sets the minimum and maximum volume limits and the volume upon switching on.

Key Management

Sets the control method that you make available to the user. You can enable or disable control by remote control or buttons on the TV.

Limited Mode

You can disable programme debugging and management, disable programme changes, disable the TV menu, OSD information or restrict certain menu items.

DTV Programme update

You can disable automatic loading of programme changes according to broadcasting or allow only manual updating.

Power On Default

You can determine what state the TV will enter after switching on. This includes the selection of input, start-up programme, whether the previous user sound and picture values are to be restored to those you have specified.

Aux Source Setting

Availability of inputs (according to the model) can be limited by unticking them in the list.

Power Management

If the TV does not accept any commands from the user, you can set it to switch off from 1 to 7 hours or leave it permanently on by selecting Off.

Password Change

Setting a custom password for access to hotel mode.

USB Cloning

You can save your settings to a USB memory stick and transfer them to another TV of the same type.
